
Sentralisasi Penyimpanan Data

Infrastruktur berbagi aman antar departemen tanpa membebani disk lokal.

TANTANGAN UTAMA

Kapasitas Terbatas

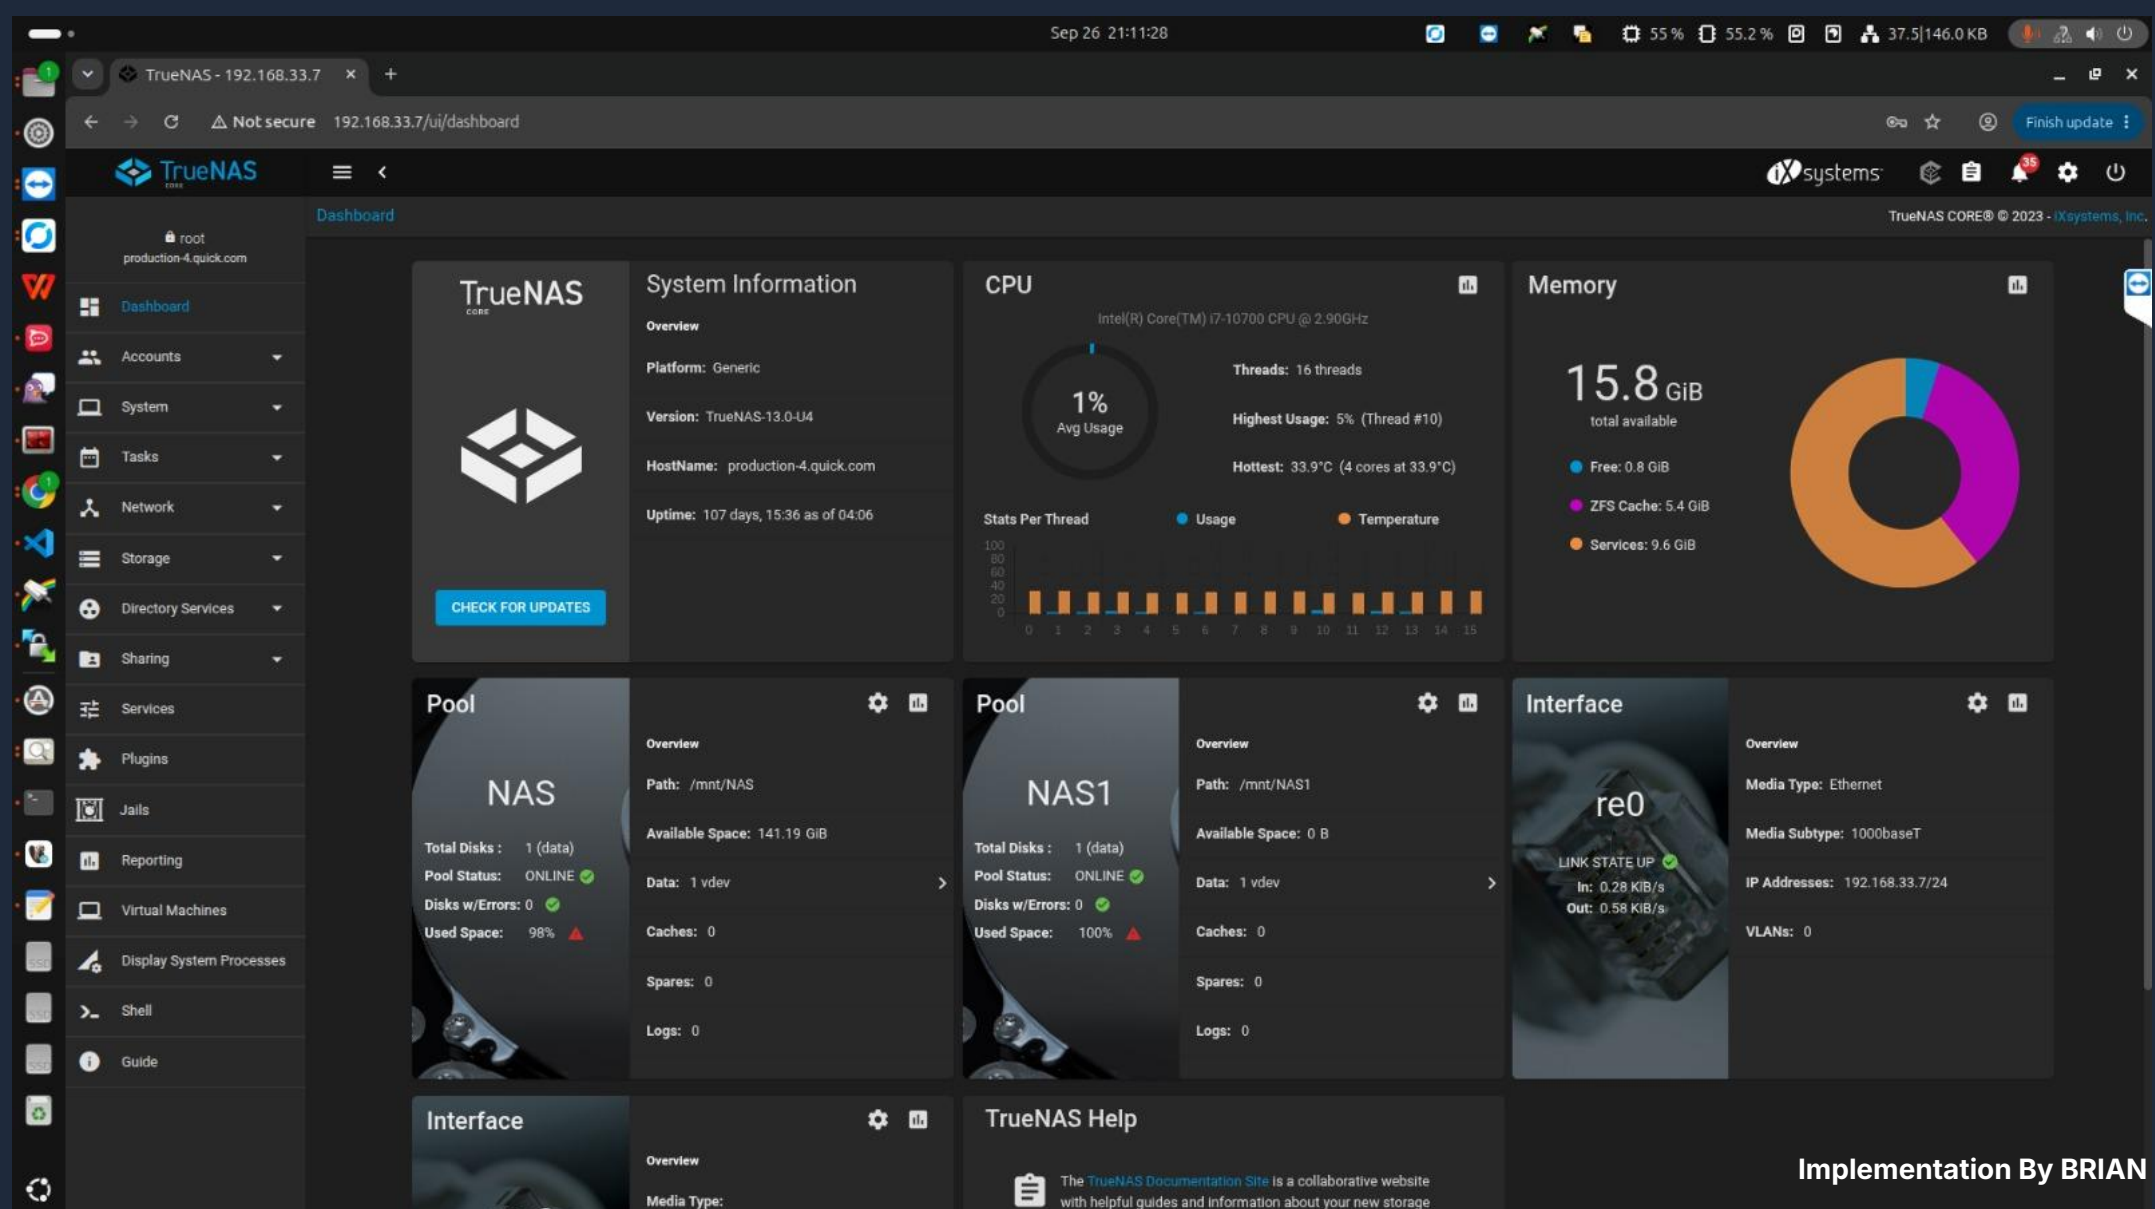

Disk komputer lokal cepat penuh.

Data Terisolasi

Pertukaran antar seksi tidak efisien.

Infrastruktur TrueNAS

Pemantauan kapasitas dan performa secara real-time.

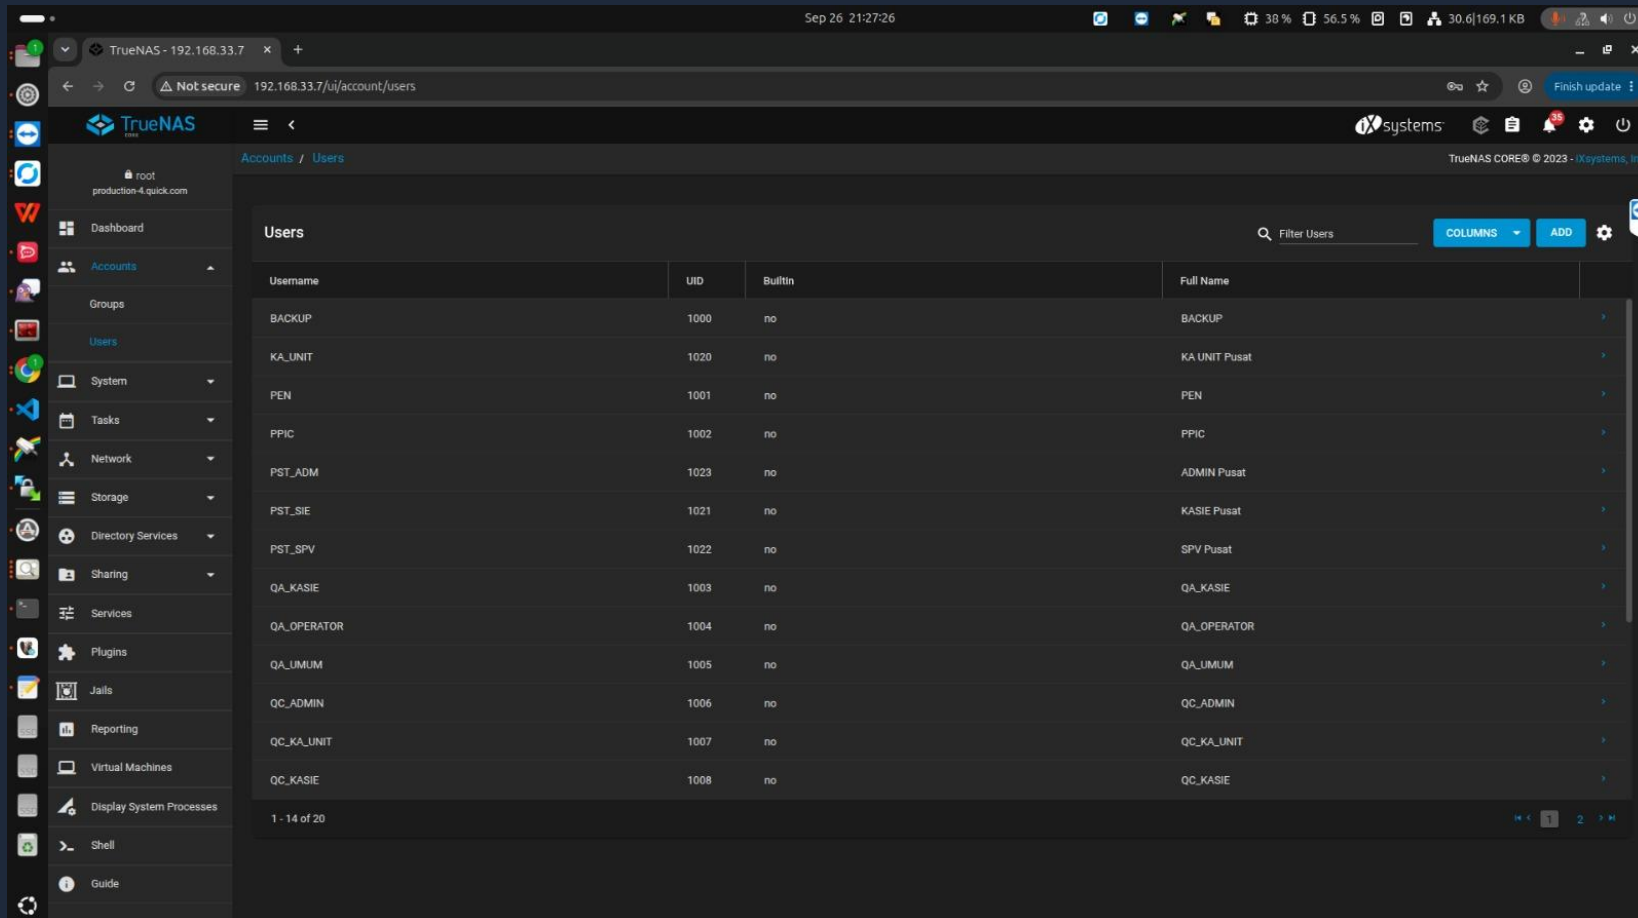

Alokasi Kapasitas

- ✓ **Dataset Terpisah:** Isolasi ruang per departemen.
- ✓ **Kapasitas Mandiri:** Ruang khusus PEN, PPIC, QA, dan QC.
- ✓ **Skalabilitas:** Ekspansi fleksibel.

The screenshot displays the TrueNAS web interface. The left sidebar contains navigation links: Dashboard, Accounts, System, Tasks, Network, Storage (selected), Pools, Snapshots, VMware-Snapshots, Disks, Import Disk, Directory Services, Sharing, Services, Plugins, Jails, Reporting, Virtual Machines, and Display System Processes. The main content area shows the 'Storage / Pools' page. It lists two pools: 'NAS (System Dataset Pool)' and 'NAS1'. Each pool has a table of datasets with columns: Name, Type, Used, Available, Compression, Compression Ratio, Readonly, Dedup, and Comments. The 'NAS' pool is ONLINE with 7 TiB (98%) used and 141.19 GiB free. The 'NAS1' pool is also ONLINE with 10.78 TiB (100%) used and 0 B free.

Manajemen Akses

Akun spesifik untuk masing-masing seksi.

Mencegah akses silang yang tidak diizinkan antar departemen.

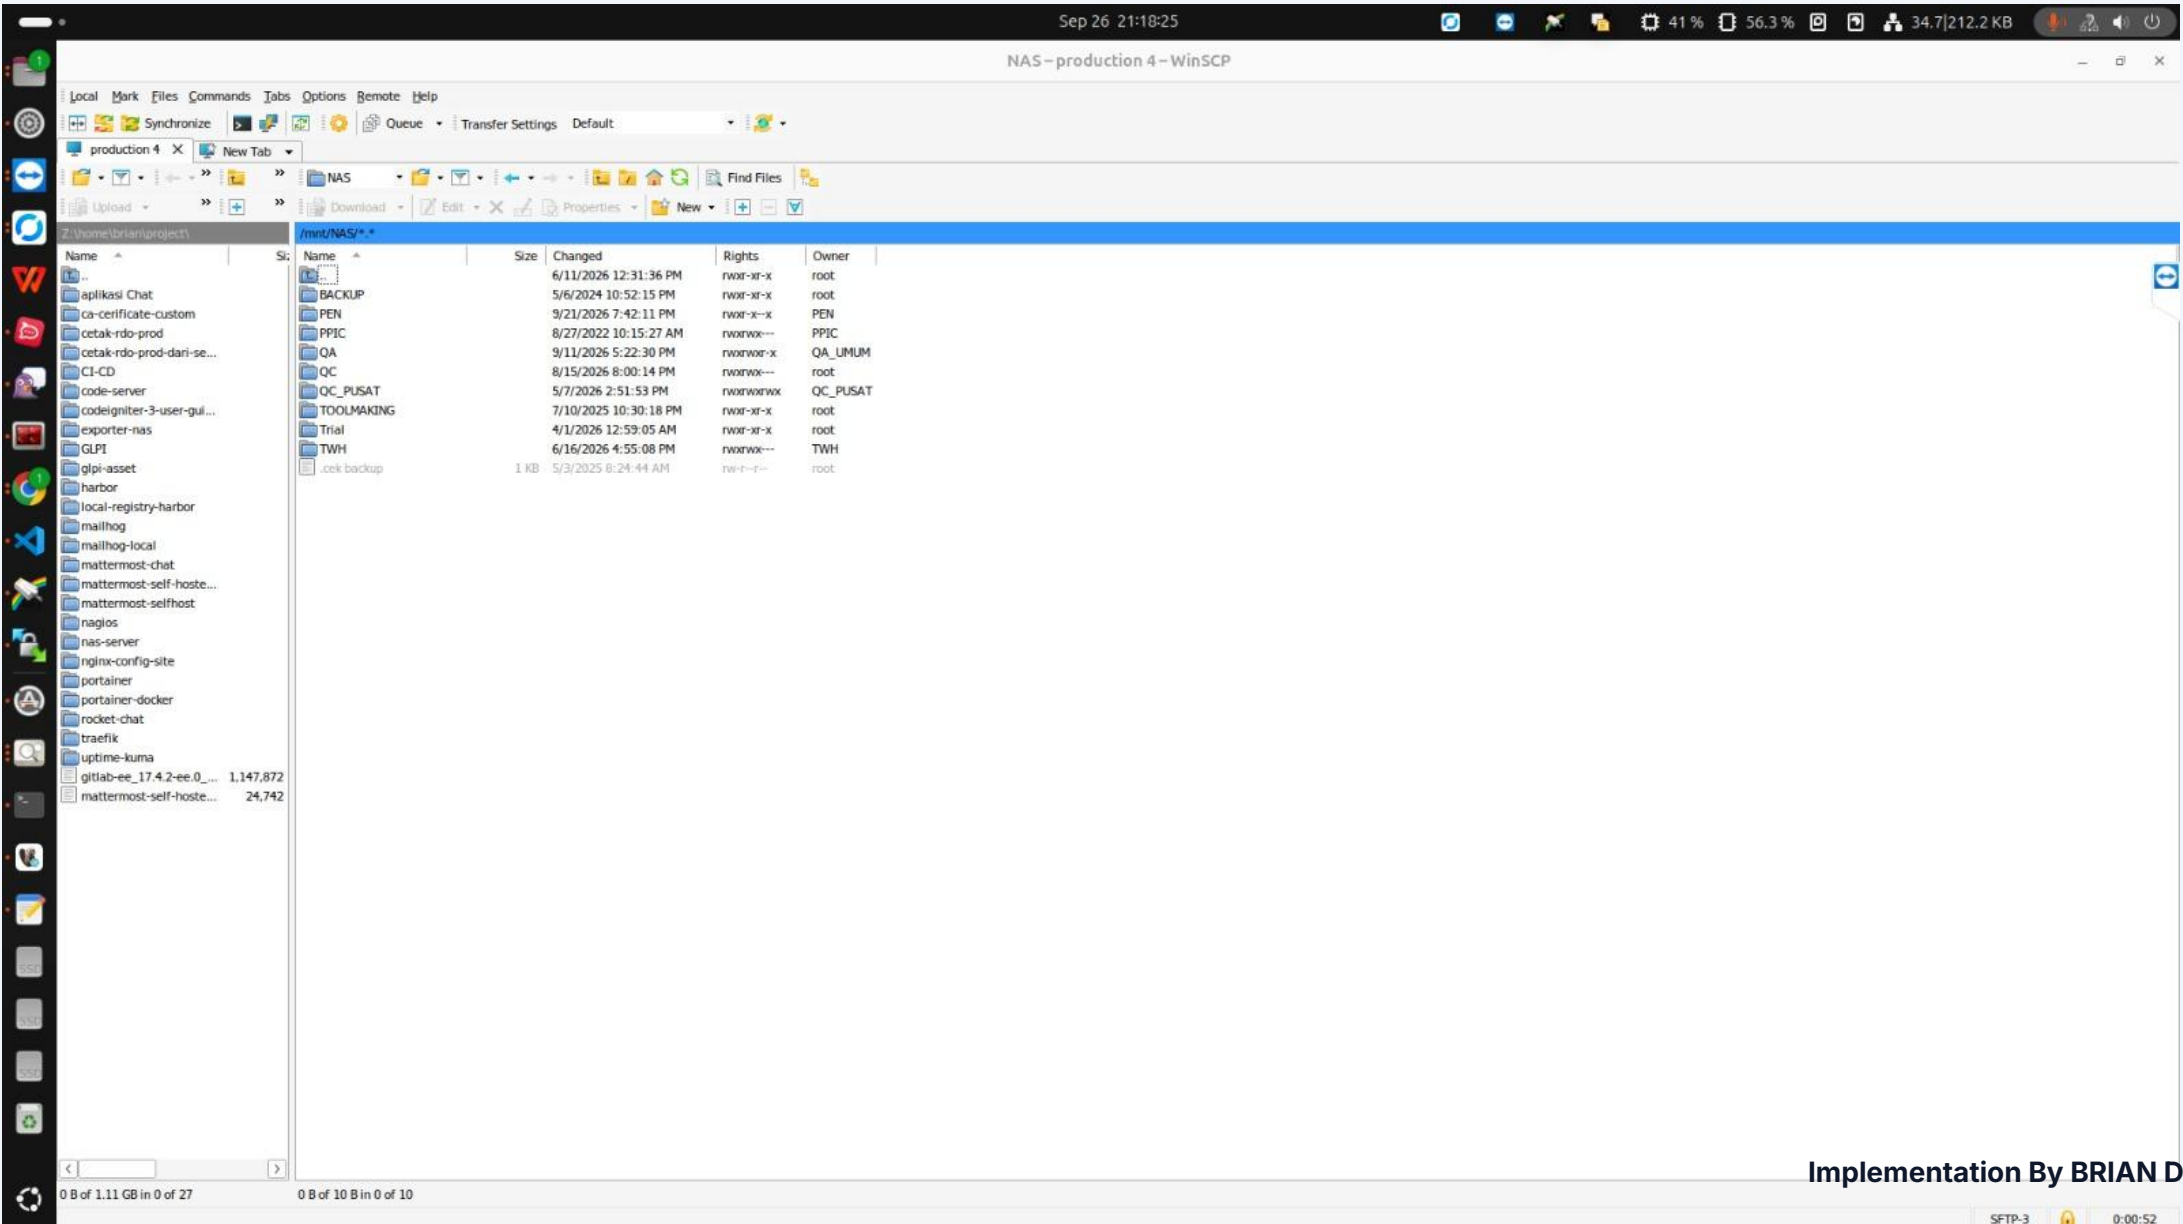

Autentikasi Ketat

Wajib login jaringan untuk mengamankan aset data.

Isolasi & Kolaborasi

Tertutup: Data privat khusus seksi.
Terbuka: Folder publik untuk pertukaran.

Tiga Manfaat Utama

Efisiensi Disk

Penyimpanan PC lokal lega.

Privasi Terjaga

Keamanan data seksi terjamin.

Kolaborasi Cepat

Pertukaran data antar departemen.

Sistem Siap Beroperasi

Data aman, tersentral, dan backup berjalan
